

Congratulations on selecting the finest quality fluid-applied elastomeric surfacing designed for parking decks and high traffic pedestrian areas. Just follow the recommendations below to maximize the life of your new surface.

Cleaning

Normal deposits of dirt and grime may be cleaned from a Dex-O-Tex installation by hosing. Oil and grease drippings may be cleaned by scrubbing with a soft brush or broom using a detergent solution followed by flushing with clear water.

Maintenance

After a period of years, it may be desirable to refinish Dex-O-Tex Auto-Dex in worn spots with special Dex-O-Tex finish which is manufactured for this purpose. Dex-O-Tex refinishing materials may be obtained through the Dex-O-Tex Contractor who made your installation.

Should your Dex-O-Tex Auto-Dex installation be damaged, it can be repaired by a Factory Trained Dex-O-Tex Contractor. In the event that any renovation or relocation of parts of the roof structure is planned which will result in cutting or removal of portions of the Dex-O-Tex Auto-Dex installation, you should contact a Dex-O-Tex Contractor before starting such work. Factory Trained Dex-O-Tex Contractors will be in a position to recommend the best methods for repairing the installation.

Common Problems to Avoid

Dex-O-Tex Auto-Dex can be damaged by gouging or scraping with sharp objects and should be protected against such damage; all snow removal should be accomplished using snow plows with roller equipped blades to avoid blades scraping surface. All shovels should be carefully inspected to insure that they have no sharp edges or breaks which may cause damage. Do not use ice choppers on Dex-O-Tex Auto-Dex. The use of chloride-type ice and snow melting compounds will not damage Dex-O-Tex Auto-Dex although they may leave a white deposit, which will require cleaning to remove.
