

Congratulations on selecting Dex-O-Tex Neotex – 261 Flooring. Just follow the recommendations below to maximize the life of your new surface.

Cleaning

Sweep or dry mop floor as required to remove all loose dirt, litter or foreign matter.

Periodically, as necessary, scrub floor with floor maintenance machine or scrubber-vac. Machine should mount a soft brush or scrubbing pad. Use neutral liquid detergent solution in strength as recommended by detergent manufacturer for resilient tile maintenance. When cleaning solution becomes dirty, discard it and mix a fresh solution. Hard to remove dirt, black heel marks, etc. should be rubbed gently with scrubbing pad wet with detergent solution.

Maintenance

Floor areas subject to scratching by trackage of sand or grit carried in from outside areas should be swept frequently.

Promptly clean up all spillage of liquids, particularly oils or grease as these may penetrate and stain the floor. Remove oil and/or grease stains with a mild detergent solution. Immediately remove and neutralize all spillage of an acid character as such spillage may attack the flooring.

Dex-O-Tex Neotex – 261 flooring can be periodically resealed with a pigmented color dressing, which is manufactured for this purpose. Resealing will tend to renew the vividness of the color and prolong the life of the floor. Dex-O-Tex resealing materials may be obtained through the Dex-O-Tex Contractor who made your installation.

Common Problems to Avoid

Should your Dex-O-Tex Neotex – 261 installation be damaged, it can be repaired by a Factory Trained Dex-O-Tex Contractor. In the event that any renovation or relocation is planned which will result in cutting or removal of portions of the Dex-O-Tex Neotex – 261 installation, you should contact a Factory Trained Dex-O-Tex Contractor before starting such work. A Trained Dex-O-Tex Contractor will be in a position to recommend the best methods for repairing the installation.
