

Dex-O-Tex Posi-Tred “O” is available in textures varying from essentially smooth (roller stipple) to highly aggressive profiling. It’s glossy finish is readily cleanable – however, the method of cleaning is dictated by the profile present.

### Cleaning

Except for the smooth finish, mops are not recommended for cleaning purposes. Cleaning is best accomplished using scrub brushes or floor maintenance machines using a soft brush or scrubbing pad. Neutral liquid detergents designed for use on resilient tile are recommended. These are available from many sources, including grocery stores. When cleaning solution becomes dirty, discard it and mix a fresh solution. Do not exceed the concentration recommended by the manufacturer.

### Maintenance

Do not use harsh or abrasive cleaners, as these will mar the finish. Hard to remove dirt and grime (including black heel marks) should be rubbed gently with a scrubbing pad wet with detergent solution. Rinse the floor with clean water.

Floor areas subject to scratching by trackage or sand or grit carried in from outside areas should be swept frequently.

Waxing of the surface is not recommended, as this will affect the slip retardance. Areas where this is not a concern may be finished with a clear, water-based floor polish of the type used on resilient flooring.

Promptly clean up all spillage of liquids including oil, grease, etc. Promptly neutralize all acids or strong alkaline liquid spillage as these may strain or physically damage flooring under prolonged contact.

### Common Problems to Avoid

In the event of damage or after a prolonged period of use, it may be necessary to refinish the floor. If so, consult Crossfield Products Corp. or a Factory Trained Applicator for detailed recommendations.
